spark = init_spark()

df = spark.read.format("mongodb").load()

# Filtra por municipio e produto
df = df.filter((df['municipio'] == 'NATAL') & (df['produto'] == 'GASOLINA'))

# Mapeia e converte valores do produto de string para float
df = df.rdd.map(lambda x: (x.municipio, float(x.valor_de_venda.replace(",", ".")))).toDF(["municipio",
"valor"])

# Obtem a media dos valores para o municipio em questao
df = df.groupBy("municipio").avg("valor")

df.show()
```

apps/average_price_by_city.py

03

Resultados

Alguns dos exemplos obtidos
através do projeto

Preço médio de gasolina por município

Comando

```
spark-submit --packages org.mongodb.spark:mongo-spark-connector:10.0.5 apps/average_price_by_city.py
```

```
+-----+-----+
|municipio|      avg(valor)|
+-----+-----+
|    NATAL|7.413106060606032|
+-----+-----+
```

Maior preço de gasolina no semestre

Comando

```
spark-submit --packages org.mongodb.spark:mongo-spark-connector:10.0.5 apps/highest_price.py
```

```
+-----+-----+-----+
| produto|max(valor)|estado|  municipio|
+-----+-----+-----+
|GASOLINA|      8.99|   RJ|RIO DE JANEIRO|
+-----+-----+-----+
```

Menor preço de gasolina por região

Comando

```
spark-submit --packages org.mongodb.spark:mongo-spark-connector:10.0.5 apps/lowest_price_by_region.py
```

```
+-----+-----+  
|regiao|min(valor)|  
+-----+-----+  
|    NE|    5.59|  
|    N|    5.19|  
|    S|    5.56|  
|   SE|    5.48|  
|    CO|    5.79|  
+-----+-----+
```

Obrigado!
